

Outdoor Water Solutions Pond & Lake Management Sales and Service

Outdoor Water Solutions, Inc., a NW Arkansas based company, has opened a new Pond and Lake Management Division servicing NW Arkansas and surrounding areas.

Services Include:

- Aquatic weed and algae identification and control
- Lake mapping (depth, temperature, DO) testing
- Water quality assessment and management
- Debris and algae removal
- Fountain sales, installation, repair and maintenance programs
- Aeration sales, installation, repair and maintenance programs
- Solar, Wind, Electric and Hybrid aeration
- Pond and lake supplies (Dyes, microbes, herbicides, algaecides)
- Artificial fish habitat enhancement
- Directional fish feeder sales and installation with Optimal branded fish food available.
- Prefabricated and DIY docks for ponds and lakes

Utilizing a team of trained technicians, we can troubleshoot and repair most fountains and electric aerators should they need work. We can also do maintenance contracts for treating ponds and maintaining most pond equipment so they perform at optimal levels year around. Putting together detailed maps and quotes for floating fountains and aeration systems is a key component of our service as we have distribution agreements with several large manufacturers as well as our own line of products.

Jay at Melody Point Development in Grove, Oklahoma states, "Outdoor Water Solutions did a great job coming up with a plan for aerating our six tiered ponds in our development. They also helped oversee the installation and worked directly with our people to get the job done right".

Local resident David H says, "Outdoor Water Solutions installed one windmill and one solar powered aeration system to aerate two of our ponds. Their working knowledge of what was needed proved to be excellent.

Their quote seemed very fair. The most impressive part came when the people that sold the equipment actually came out with their crew and worked to complete the installation. Start to finish . . . A top notch experience."
